Web Hosting

Cavalier Web Hosting Service provides business customers with a turnkey solution for creating and hosting a business class website. This service gives your businesses the ability to create a basic website in a matter of minutes with little or no knowledge of web development through the use of our easy to use application. Our customers receive website statistics, email account creation, content management, and e-commerce support. This service will also provide our customers the ability to scale their site as needed, in both hosting space, and e-mail needs.

Features and Functionality:

- Email: Domain based email available to the customer via web interface or downloadable to their PC via any software email client
- File Transfer: Popular FTP service that will allow the customer to upload content, and/or share files via their webpage
- Domain Name Services (DNS): The registration of new, and transfer of existing domain names to our web servers.
- Storage: Options for with 500Mb, 750Mb or 1,000Mb of disk space all with unlimited transfer
- Website Administration: Tools that allow the customer to control and maintain all features, services and content of their website. (Website Statistics, Account Control Panel, Sub domain Management, Free Professional Website Templates, Create and Change Designs at Any Time, Search Engine Submission, SSH accessibility
- Ecommerce Features: Tools that allow the customer to build their own presence on the web in order to sell items via their website (Free Shared SSL Certificate, SSL Secure Server, Credit Card Processing)
- Scripting: The ability to host and support applications that require the following services: PHP, Perl, CGI, CGI-BIN, ASP / .NET, Cold Fusion, Javascript/DHTML, ODBC/DSN, Server Side Includes (SSI)
- Complimentary Scripts: Includes helpful services that add value to the web hosting bundle including: Message Forum (example: PHPBB2), Form-Mail, phpPgAdmin, Traffic Counter, Streaming Audio Support, Streaming Video Support, Real Audio & Video Support
- Supported Databases: Supports all major databases commonly used for web applications including: MYSQL, PostgreSQL, MSSQL
